

Connor Karr

connorpkarr@gmail.com | (203)-604-3590 | Stamford, CT | linkedin.com/in/connorkarr/
Availability June 2026 - December 2026

Education

Northeastern University

Boston, MA

COMPUTER SCIENCE AND ECONOMICS, GPA: 3.9

September 2023 - May 2027

Relevant Coursework: Information Retrieval, Algorithms & Data, Database Design, Object Orientated Design, Logic & Computation, Advanced Programming / App. Dev, Fundamentals of Computer Science 1 & 2, Multivariable Calculus
Honors: Dean's List (All Semesters), AP Scholar with Distinction, High Honors

Skills

Languages: Python, Java, SQL, Spring Boot, Maven, TypeScript, JavaScript, HTML, CSS, C, C++, Swift, Lisp

Software & Tools: Postman, DBeaver, Figma, Excel, Photoshop, Adobe XD, Adobe Illustrator, Blender

Work Experience

Priceline - Booking Holdings Inc.

Norwalk, CT

FINTECH SOFTWARE ENGINEER

July 2025 - December 2025

- Collaborated with 5-person engineering team to enhance financial transaction monitoring microservices processing 10M+ daily booking transactions, implementing sophisticated validation logic for offer-for-sale lookups and component reservations.
- Developed REST APIs for error segmentation workflows and utilized Postman for comprehensive endpoint testing, while leveraging DBeaver and SQL queries to validate data integrity and optimize database performance.
- Enhanced multi-source system validation services supporting 15+ payment processors and booking platforms, creating APIs that automated manual financial reconciliation processes and reduced processing time by 60%.
- Optimized existing business logic engines and validation rules through API-driven solutions, contributing to 99.9% system uptime during peak booking periods and streamlined manual workflow operations.

SummerTech at Purchase College

Purchase, NY

SENIOR COUNSELOR

June 2020 - August 2024

- Instructed 25 campers per summer ages 9-14 on Java and Python coding, teaching from blank slate to advanced data frames
- Reviewed and revised 250+ camper evaluations, documenting weekly progress in and outside the classroom
- Supervised 12 junior counselors, guiding them in classroom management, adapting to challenging social dynamics, and effectively communicating complex information.
- Developed a safe, supportive space for children with learning and social disabilities to build connections and strengthen logic skills.

Coditum & Wyzant

Remote

CODING TUTOR

May 2024 - Present

- Mentored and taught 20+ students coding fundamentals and advanced skills across multiple programming languages
- Focused on project-based learning using React, Lua, Java, Python, HTML, CSS, and JavaScript.

Northeastern Electric Racing

Boston, MA

WEB DEVELOPMENT TEAM MEMBER

September 2024 - January 2025

- Assisted in developing Finishline, a project and team management website tailored for the electric racing car team.
- Worked on a team to improve features to display deadlines, track progress, and record developments, ensuring project coordination

Projects

TaskFlow: Project Organization Tool | TypeScript, JavaScript, SQL

December 2024

- Designed and implemented a taskflow management system with a structured backend using Express.js, Prisma ORM, and modular routers for managing users, projects, and links; integrated middleware for validation and error handling, ensuring robust functionality.
- Developed and optimized frontend features using React and custom hooks for state management, leveraging Axios for seamless backend communication; created reusable components and implemented Prisma query arguments and transformers to align data models, ensuring scalability and maintainability.

Cavity Risk Analysis Program with Bayesian Modeling | Python, SQL

December 2024

- Designed and implemented a Python-based data analysis program using Bayes' Theorem to model cavity risk factors, such as diet, oral hygiene habits, and genetic predisposition; processed datasets with Pandas and NumPy to ensure data integrity and accuracy.
- Visualized insights and improved prediction accuracy with Matplotlib and Seaborn, highlighting key correlations and risk probabilities, leading to a 20% enhancement in cavity risk prediction accuracy based on test data.

Drawdle: Daily Drawing Web Application | HTML, CSS, JavaScript, SQL, Figma

May 2024

- Built a full-stack web application inspired by Wordle to create, save, and manage daily drawings with a secure backend featuring 6+ endpoints for user authentication and drawing management.
- Designed and integrated an interactive user interface using Figma and HTML5 Canvas API, enabling seamless drawing and editing functionality; utilized Axios for frontend-backend communication and JWT for secure user sessions with persistent SQL data storage.

Siri Voice Commands Project | Python, BERT

August 2023

- Developed a Natural Language Processing (NLP) application using a pre-trained BERT model to classify and interpret user intents with 99% accuracy, leveraging a word-level tokenizer to support diverse vocabulary and enhance input comprehension.
- Integrated dynamic features like weather inquiries, music playback, and reminders via external APIs, optimizing for diverse accents and speech patterns to ensure robust performance and accessibility for all users.
