Education

Northeastern University

Boston, MA

COMPUTER SCIENCE AND ECONOMICS, GPA: 3.9

September 2023 - May 2027

Relevant Coursework: Web Development, Information Retrieval, Algorithms & Data, Database Design, Object Orientated Design, Logic & Computation, Advanced Programming / App. Dev, Financial Economics, Game Theory, Law and Economics, Multivariable Calculus
Honors: Dean's List (All Semesters), AP Scholar with Distinction, High Honors

Skills

Languages: Python, Java, SQL, Spring Boot, Maven, TypeScript, JavaScript, HTML, CSS, C, C++, Swift, Lisp

Software & Tools: Postman, DBeaver, Figma, Excel, Photoshop, Adobe XD, Adobe Illustrator, Blender

Work Experience

Priceline - Booking Holdings Inc.

Norwalk, CT

FINTECH SOFTWARE ENGINEER

July 2025 - December 2025

- Collaborated with 5-person engineering team to enhance financial transaction monitoring microservices processing 10M+ daily booking transactions, implementing sophisticated validation logic for offer-for-sale lookups and component reservations.
- Developed REST APIs for error segmentation workflows and utilized Postman for comprehensive endpoint testing, while leveraging DBeaver and SQL queries to validate data integrity and optimize database performance.
- Enhanced multi-source system validation services supporting 15+ payment processors and booking platforms, creating APIs that automated manual financial reconciliation processes and reduced processing time by 60%.
- Optimized existing business logic engines and validation rules through API-driven solutions, contributing to 99.9% system uptime during peak booking periods and streamlined manual workflow operations.

SummerTech at Purchase College

Purchase, NY

SENIOR COUNSELOR

June 2020 - August 2024

- Instructed 25 campers per summer ages 9-14 on Java and Python coding, teaching from blank slate to advanced data frames
- Reviewed and revised 250+ camper evaluations, documenting weekly progress in and outside the classroom
- Supervised 12 junior counselors, guiding them in classroom management, adapting to challenging social dynamics, and effectively communicating complex information.
- Developed a safe, supportive space for children with learning and social disabilities to build connections and strengthen logic skills.

TAMID Group at Northeastern University

Boston, MA

TECH CONSULTING DEVELOPER

January 2025 - Present

- Developed a full-stack internal news platform using React, Express, and MongoDB to improve communication across our chapter.
- Integrated real-time stock and weather APIs using Axios to enhance the platform's functionality and user engagement.
- Designed a modular backend for easy categorization and addition of news articles via a structured MongoDB schema.
- Collaborated in a 3-person agile team, managing version control and development cycles using Git and GitHub.

Coditum & Wyzant

Remote

CODING TUTOR

May 2024 - Present

- Mentored and taught 20+ students coding fundamentals and advanced skills across multiple programming languages
- Focused on project-based learning using React, Lua, Java, Python, HTML, CSS, and JavaScript.

Projects

QuantumWealth: Portfolio Risk Analyzer | React, Node.js, Express, Recharts

November 2025 - January 2026

- Developed full-stack web app using React, Node.js, and Express.js to simulate investment risk via Monte Carlo methods, running 10K+ simulations to forecast multi-asset portfolio outcomes over customizable 5-50 year time horizons.
- Implemented Box-Muller transform and statistical models to calculate Value at Risk (VaR), Conditional VaR, Sharpe ratio, and volatility; designed RESTful API with endpoints for simulations, risk metrics, and optimization logic.
- Built responsive UI with Tailwind CSS and Framer Motion, featuring real-time portfolio rebalancing, adjustable simulation parameters, and interactive Recharts visualizations to display projection bands and outcome distributions.

Drawdle: Daily Drawing Web App | Node.js, Express, HTML5 Canvas, SQL

December 2025 - January 2026

- Built full-stack app with 8 RESTful endpoints, JWT-based auth, and a normalized SQL schema; supported user registration, drawing storage, and daily prompt retrieval with secure, persistent session handling via localStorage.
- Developed interactive drawing interface using HTML5 Canvas API with real-time rendering, mouse/touch support, and responsive design; integrated Axios for authenticated API calls and modal-based UI components.
- Implemented bcrypt password hashing, authentication middleware, and parameterized SQL queries to prevent injection; structured backend with modular routes and automated DB initialization for scalable deployment.

Netflix Watch Party Organizer | Python, Flask, Scikit-learn, JavaScript

December 2025 - January 2026

- Developed full-stack web app using Flask, SQLite, and vanilla JS to generate personalized streaming playlists via K-Means clustering; engineered 15+ features including mood, pacing, genre, and viewing behavior for accurate content grouping.
- Built RESTful API with 7 endpoints, applied PCA to preserve 95% feature variance, and implemented a feedback loop with weighted feature tuning; reduced content discovery time by 95% through real-time playlist generation in under 3 seconds.
